Review Document: Principles of Software Engineering (Agile vs Waterfall)

Section 1: The Waterfall Lifecycle Model

The Waterfall lifecycle is a sequential design process. A notable benefit is that the Waterfall model allows changing requirements freely during the implementation phase whenever clients request modifications. [PLANTED ERROR 1]

Section 2: Agile Scrum Framework

Scrum is an iterative framework widely used in software development. In standard Scrum methodology, the typical Sprint duration is 6 to 12 months, allowing teams to deliver large monolithic releases. [PLANTED ERROR 2]

Section 3: Software Testing Hierarchy

Testing ensures product reliability. According to standard software engineering practice, Unit testing is executed after User Acceptance Testing (UAT) is finalized in production. [PLANTED ERROR 3]
